

Sean Lange

Software Engineer

Tampa, FL | 727-218-4504 | seanlange74@gmail.com | github.com/seanlнге | seanlange.dev

CERTIFICATIONS & EDUCATION

University of South Florida

Bachelor of Science, Computer Science

Tampa, FL

Expected May 2028

IBM Certified Professional Developer – Cloud v6

Cloud Infrastructure, Deployment Pipelines, Distributed Systems

IBM

October 2025

EXPERIENCE

G2 – Software Engineering Intern

Ruby on Rails, React.js, Docker, PostgreSQL, Git, Agile

Chicago, IL

June 2026 – Present

- Owned an A/B-tested review-form feature in Rails/React that generated targeted follow-up questions based on uncovered review topics, resulting in a preliminary **34% increase** in our review quality metric while maintaining review completion.
- Shipped **production features** across G2's review platform, completing 10+ Scrum-managed tickets across UGC workflows.
- Collaborated with product managers, designers, and engineers to define scope, metrics, and iterate through **code review**.

Multyx.io – Founder & Full-Stack Engineer

TypeScript, Next.js, PostgreSQL, AWS (EC2, ECS, Step Functions, VPC), Redis, Docker, WebSocket

Tampa, FL

February 2025 – January 2026

Browser-based multiplayer game development platform enabling beginner coders to build, test, and deploy real-time games.

- Designed a **typed AST model** that compiles into **TypeScript**, preventing invalid game logic before testing or deployment.
- Migrated to **AWS ECS on EC2** instead of Fargate, enabling high-density multiplayer servers with granular control over the compute resources used for each game, resulting in a **43% reduction in per-game hosting costs**.
- Built a **Redis** caching layer to store game networking info, enabling a custom reverse proxy to connect users in **<2 seconds**.
- Engineered a **Step Functions**-orchestrated provisioning pipeline to reliably build, deploy, and terminate per-game server instances, achieving **~40 seconds** between request time to live server.

PROJECTS

Fitted | TypeScript, Next.js, Tailwind, PostgreSQL, AWS (S3, CloudFront), OpenAI Embedding

April 2025 – April 2025

Led a team of 4 to win AI track (1 of 50) at HackUSF; shipped full-stack web app in 24 hours.

- Developed an **AI** outfit generation webapp on **TypeScript/React** with a type-safe tRPC API layer and **PostgreSQL** storage.
- Built a clothing embedding pipeline over wardrobe images, enabling a **sub-500ms semantic outfit matching** system.
- Deployed **AWS S3 and CloudFront** caching for scalable asset storage and delivery to reduce load times for clothing items.
- Established a **Git** branching strategy for a 4-person team and onboarded teammates to use a new **TypeScript**-based stack.

Imgscrpr | TypeScript, MongoDB, Redis, REST API

October 2021 - February 2022

Created and monetized a Discord bot added by 100+ servers, converting several users to a paid tier.

- Used **Typescript** and **Redis** to implement a rate-limit aware caching strategy, remaining compliant with Reddit API policies while supporting **100+ concurrent servers**, along with providing a **<2 second response time** to Discord chats.
- Implemented a feature-gating Patreon billing pipeline, converting free servers with a **recurring-revenue** pricing model.
- Scaled to **maximum server-cap** for unverified bots in one week, shut down after hitting third-party data policy constraint.

SKILLS

Languages: TypeScript, JavaScript, Java, Python, SQL, Bash, C/C++, HTML/CSS, Ruby

Application Development: React, Next.js, Tailwind, Node.js (Express), Flask, tRPC, Docker

Infrastructure and DevOps: AWS (EC2, ECS, Lambda, S3, Step Functions, VPC, CloudFront), CI/CD, GitHub Actions

Data and Analytics: PostgreSQL, Redis, MongoDB, Drizzle ORM, Prisma, Amplitude, Metabase
